

My name is Manash Kumar. I am from Saharsa Bihar. Currently I am doing my b.tech from National Institute of Technology, Raipur. I am from an economically poor background. I faced many challenges during my academic journey. I grew up in a small farmer family. Last year, the annual income of my family was about INR 90,000 per year. My family has 0.7 acres of land on which we do agriculture work to cover our economic and other basic needs. I have one sibling who is studying a Bachelor of Arts at a local government college.

This scholarship amount will help me pay for my hostel accommodations and other living expenses. This amount will also help me to reduce the debt burden on my family, which has significantly increased during my academic career. I aim to pursue a master's degree in chemical engineering with financial support from this scholarship. Additionally, I have published a research article through the NIT Raipur International Seminar, which will soon be available on Google Scholar. This scholarship will enable me to attend more seminars in the fields of environmental and chemical engineering. This scholarship will be a blessing for me in all these ways.
